Area.—Twenty-two square miles were added to the district from Ahmednagar in 1887, and an area of 5 square miles were transferred to Ahmednagar during the same year; to meet these changes, and to accord with the measurement of the survey carried out in 1871—1900 the area of the district has been increased from 5,347 (1880-81) to 5,365 square miles. The táluka variations are:—

Recent Surveys.—The Revision Survey, of which the rates were introduced between 1867—1900, showed an increase in the total culturable area of 19,289 acres, in the 5 tálukas of the district for which the figures of original survey are available. The total area of the district ascertained at the Revision Survey was 2,046,900 acres and assessment Rs. 12,43,791. By the revised settlement the total assessment on the Government occupied land in the 5 tálukas was raised by Rs. 1,33,221 from Rs. 6,07,118 to Rs. 7,40,339, equal to an increase of 22 per cent. The táluka variations are shown below:—

Famine.—Famine occurred in 1896-97, mainly due to failure of crops in the affected tracts from want of seasonable rain. An area of 2,987 square miles was specially affected. Relief works were opened and continued for 14 months. The maximum number of persons receiving relief reached 42,075 in September. In 1899-1900 the rains again failed, resulting in famine. An area of 5,241 square miles was affected, the crop outturn being only 31 per cent. of the normal. Relief works were opened in October 1899, the daily average thereon being 254, and were continued till October 1902 with an intermediate break of 5 months. The highest daily average number relieved was 96,190 in May 1900 and the daily average of the gratuitously relieved 28,536. Special relief was also given to weavers in their own craft during the famine. The death rate in the district was 52·64 per mille. The total number of deaths from all causes on relief work was 1,872, of which 729 were due to dysentery and diarrhœa and 401 to cholera. The percentage proportion of sexes and children among the relief workers of the district was 33 males, 47 females and 20 children. The average wage per worker unit was Rs. 0-1-5. In 1900-01, the area affected was the same as in 1899-1900. The highest daily average number in receipt of relief was 35,834, 4,921 being gratuitously relieved. The death rate during the year was 35·10 per mille. In 1901-02 the total area affected was 1,020 square miles. The daily average attendance on relief works was 5,690 in September 1902. The number in receipt of gratuitous relief was 3,776. The death rate was 32·99 per mille. The year 1903-04 was unfavourable, but no relief measures were found necessary. In 1904-05 a greater part of the district was affected by the partial failure of crops. Relief works were opened but were subsequently closed for want of workers. In 1905-06 there was an almost total failure of crops and fodder. The area affected was 2,644 square miles and the population 351,000. Test works which were afterwards converted into relief works were started in February 1906, the daily average number of persons thereon

being 4,329. The percentage proportion of sexes and children among the relief workers was 34 males, 55 females and 19 children. The year 1907-08 was a year of scarcity. Dole was given to inferior village servants and infirms. On the whole 32,977 units were relieved with an expenditure of Rs. 2,099.

Plague.—The first case of plague occurred in Poona City in January 1897, and the disease soon spread into the district. The total mortality in the district excluding Poona City up to the end of 1910-11 amounted to over 39,000 or 4 per cent. of the total population. The district suffered most in 1899-1900 and 1902-03. The epidemics in Poona City in 1897, 1899 and 1906 were very severe, and the city has suffered annually from plague since the first outbreak in 1897.
